

U1250 Series Handheld Digital Multimeters

Test more – more safely

Introduction

The Keysight Technologies, Inc. U1250 Series handheld digital multimeters (DMMs) exceed your expectations by delivering powerful features and performance that meet your toughest requirements and applications. The series latest multimeters, the offering capabilities and functions you need.

Key benefits

- Superior contrast from organic LED (OLED) display ¹
- 50,000-count dual display
- Up to 0.025% basic DCV accuracy
- True-RMS AC and AC+DC² measurements
- K-type and J-type² temperature measurements
- Manual and automated (interval) data logging; internally to DMM and externally to PC
- CAT III 1000 V and CAT IV 600 V safety protection
- Built-in 20-MHz frequency counter ²
- Built-in programmable square-wave generator ²

Do more with just one instrument

The basic model, U1251B, expands your capabilities beyond typical DMM measurements to include data logging. The U1252B starts with the same foundation, and then adds a 20-MHz frequency counter and programmable square-wave generator—so you'd be able to perform more tests conveniently with one tool. What's more: both models come bundled with a complete set of accessories to equip you right from the start at no extra cost.

Offering the same functionality as the U1252B, the U1253B is the groundbreaking OLED handheld DMM. You won't have to squint to be sure you're reading it right: On the go or on the bench, you'll get crystal-clear viewing indoors, even in dark, off-angle situations.

Find problems quickly

Troubleshooting can be tricky, especially when you're dealing with elusive problems. With the U1250 Series' data logging capability, you can ensure that every reading gets recorded manually or at intervals you specify. Better yet: you can have virtually unlimited data logging saves when you connect any of the U1250 Series DMM to a PC with the optional IR-to-USB cable.

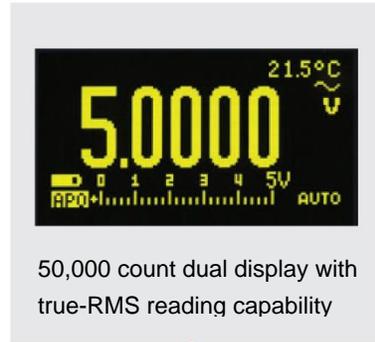

In addition, the U1250 Series lets you achieve greater confidence in your measurements with accurate true-RMS AC measurements, low DCV error rate of up to 0.025% and high-resolution display of 50,000 counts.

Uncompromising ruggedness and safety

The U1250 Series DMMs are housed in robust overmold enclosures, rated at CAT III 1000 V

and CAT IV 600 V and operate over a wide temperature range of $-20\text{ }^{\circ}\text{C}$ to $+55\text{ }^{\circ}\text{C}$. Each DMM also include a 30 kA high energy fuse to further protect you against violent fuse failures during high-current measurements. Built tough and certified to stringent industrial standards, the U1250 DMM is what you need to face the demands of everyday tasks.

- Input impedance: Refer to Table A on page 10
- The accuracy could be improved to 0.05%+10 for U1251B or 0.05%+5 for U1252B and U1253B by using the Null function to zero out the thermal effect before measuring the signal.
- These specifications are defined for 2-wire ohms using Math Null. Without Math Null, add 0.2 ohm additional error.
- The accuracy of 500 Ω and 5 kΩ is specified after NULL function, which is used to subtract the test lead resistance and the thermal effect.
- For the range of 50 MΩ and 500 MΩ, the R.H. is specified for < 60%.
- The accuracy is specified for < 50 nS and after NULL function with open test lead.
- Always use the NULL function to zero out thermal effect with open test lead before measuring the signal. If the NULL function is not used, an additional 20 counts needs to be added to the DC current accuracy. Thermal effect could occur due to the following:
 - Wrong operation to measure the high voltage of 50 V ~ 1000 V for resistance, diode, and mV measurements.
 - After battery-charging has completed.
 - After measuring a current greater than 440 mA, it is suggested that the meter be left to cool down for twice the measuring time used.
- Specification applies with settling time of (1.2*Current^2) seconds. For example, DCI: 3 A will require 11 s of settling time.
- Current can be measured up to 10 A continuously. An additional 0.5% needs to be added to the specified accuracy if the signal measured is in the range of 10 A~20 A for 30 seconds maximum. After measuring a current of > 10 A, leave the meter to cool down for twice the measuring time used before application of low current measurement.

- Input impedance: Refer to Table A on page 10.
- ACV measurement is AC coupled; while ACmV and AC µA/mA/A measurement are DC coupled. All specifications are valid from 5% to 100% of range.
- Crest factor ≤ 5 at half-scale, ≤ 3 at full-scale, and decrease reciprocally for overrange as 3 * Full Scale / Input; except for 1000 mV and 1000 V ranges, where this ranges have crest factor ≤ 3 at half-scale, ≤ 1.5 at full scale, and decrease reciprocally for overrange as 1.5 * Full Scale / Input. For non-sinusoidal waveform, add 0.1 % of reading ±0.3 % of range.
- These specifications are for typical performance.
- Input current > 35 µARMS.
- Input current < 3 ARMS.
- Current can be measured from 2.5 A up to 10 A continuously. An additional 0.5% needs to be added to the specified accuracy if the signal measured is in the range of 10 A ~ 20 A for 30 seconds maximum. After measuring a current of > 10 A, leave the meter to cool down for twice the measuring time used before application of low current measurement.
- Additional error to be added for frequency > 15 kHz and signal input < 10 % of range: 3 counts of LSD per kHz.

After measuring a current of > 10 A, leave the meter to cool down for twice the measuring time used before application of low current measurement.
6. The accuracy does not include the tolerance of the thermocouple probe. The thermal sensor plugged into the meter should be placed in the operating environment for at least an hour.
7. Use the Null function to reduce the thermal effect. Before using the Null function, set the meter to no ambient compensation (0C) mode and keep the thermocouple probe as close to the meter as possible, avoiding contact with any surface that has a different temperature from the ambient temperature.
8. When measuring temperature with respect to any temperature calibrator, try to set both the calibrator and the meter with an external reference (without internal ambient compensation). If both the calibrator and the meter are set with internal reference (with internal ambient compensation), deviation may show between the readings of the calibrator and the meter, due to differences in ambient compensation between the calibrator and the meter.

1. All frequency counters are susceptible to errors. Shielding inputs from external noise pickup is critical to minimize measurement errors. For non-square wave signals, add 5 counts.
2. Output impedance: 3.5 k Ω maximum.
3. The positive or negative pulse width must be greater than 50 μs for adjustment of the duty cycle or pulse width under different frequencies. Otherwise, the accuracy and range will be different from the specifications defined.
4. For signal frequencies greater than 1 kHz, an addition of 0.1% per kHz is added to the accuracy.

General specifications

Display

Both primary and secondary displays are 5-digit on the LCD display.
Both the primary and secondary displays offer a maximum resolution of 50,000 counts.
Automatic polarity indication.

Connectivity

IR to USB

Power consumption

105 mVA/420 mVA (with backlight) maximum (U1251B)
165 mVA/480 mVA (with backlight) maximum (U1252B)
420 mVA maximum (U1253B)

Battery type

9 V alkaline battery (ANSI/NEDA 1604A or IEC 6LR61)
9 V carbon-zinc battery (ANSI/NEDA 1604D or IEC6F22)
7.2 V or 8.4 V Ni-MH rechargeable battery

Battery life

U1251B: 72 hours typical
U1252B: 36 hours typical
U1253B: 8 hours typical

Operating environment

- Full accuracy at $-20\text{ }^{\circ}\text{C}$ to $55\text{ }^{\circ}\text{C}$; and to 80% RH for temperatures up to $35\text{ }^{\circ}\text{C}$, decreasing linearly to 50% RH at $55\text{ }^{\circ}\text{C}$
- 0 to 2000 m altitude per IEC 61010-1 2nd Edition CAT III, 1000 V/CAT IV, 600 V

Storage compliance

$-40\text{ }^{\circ}\text{C}$ to $70\text{ }^{\circ}\text{C}$ with battery removed

Measurement category

CAT III 1000 V / CAT IV 600 V

Regulatory

Refer to Declaration of Conformity for the latest revisions of regulatory compliance at <http://www.keysight.com/go/conformity>

Note: If used in close proximity to an RF transmitter or when subjected to continuously present electromagnetic phenomena, some recoverable degradation of performance may occur.

Common Mode Rejection Ratio (CMRR)

U1251B/U1252B: > 90 dB at DC, 50/60 Hz \pm 0.1% (1 kW unbalanced)

U1253B: > 100 dB at DC, 50/60 Hz \pm 0.1% (1 kW unbalanced)

Normal Mode Rejection Ratio (NMRR)

U1251B/U1252B: > 60 dB at DC, 50/60 Hz \pm 0.1%

U1253B: > 90 dB at DC, 50/60 Hz \pm 0.1%

Temperature coefficient

0.15 * (specified accuracy)/ $^{\circ}$ C (from -20 $^{\circ}$ C to 18 $^{\circ}$ C or 28 $^{\circ}$ C to 55 $^{\circ}$ C)

Shock and vibration

Tested to IEC/EN 60068-2

Dimensions (HxWxD)

203.5 mm x 94.4 mm x 59.0 mm

Weight

U1251B: 504 \pm 5 g with battery

U1252B/U1253B: 527 \pm 5 g with battery

U1180A thermocouple adapter + lead kit, J and K types	Includes thermocouple adapter, thermocouple bead J-type and thermocouple bead K-type.	<ul style="list-style-type: none"> • T/C adapter J/K-type • T/C bead J-type: $-20\text{ }^{\circ}\text{C}$ to $200\text{ }^{\circ}\text{C}$ • T/C bead K-type: $-20\text{ }^{\circ}\text{C}$ to $200\text{ }^{\circ}\text{C}$
U1183A air temperature probe		<ul style="list-style-type: none"> • Type-K T/C for use in air and non-caustic gas • Measurement range: $-50\text{ }^{\circ}\text{C}$ to $800\text{ }^{\circ}\text{C}$ • Includes adapter U1184A for connection to DMM
U1181A immersion temperature probe		<ul style="list-style-type: none"> • Type-K T/C for use in oil and other liquids • Measurement range: $-50\text{ }^{\circ}\text{C}$ to $700\text{ }^{\circ}\text{C}$ • Includes adapter U1184A for connection to DMM

Model number

Description

U1182A industrial surface temperature probe

- Type-K T/C for use on still surfaces
- Measurement range: $-50\text{ }^{\circ}\text{C}$ to $400\text{ }^{\circ}\text{C}$
- Includes adapter U1184A for connection to DMM

U1184A temperature probe adapter

- Mini-connector-to-banana-plug adapter for use with DMM

U1185A J-type thermocouple and adapter

- T/C adapter J/K-type
- T/C bead J-type: $-20\text{ }^{\circ}\text{C}$ to $200\text{ }^{\circ}\text{C}$

U1186A K-type thermocouple and adapter

- T/C adapter J/K-type
- T/C bead J-type: $-20\text{ }^{\circ}\text{C}$ to $200\text{ }^{\circ}\text{C}$

Model number

Carrying case
U1172A transit case
(aluminium-clad)

Description

The robust casing to transport your DMM and accessories.

Description

- Aluminum-clad, black panel construction
- Dimension: 18" (H) x 13" (W) x 6" (D)
- Weight: 4 kg

U1174A soft carrying case

The convenient way to carry your DMM and essential accessories.

- Dimension: 9" (H) x 5" (W) x 3" (D)

Hanging kit
U1171A magnetic hanging kit

For fastening of DMM to a steel surface so both hands are free.

AC adaptor
U1170A AC adaptor

Includes AC power cord based on country.
